*Shaping Lives...
Empowering Communities...*

Timeline & harvesting

Coriander seeds germinate in 7-10 days, with leaves ready to harvest 40-48 days (5 ½ – 7 weeks) later. From seed to harvest, Coriander takes 50-55 days.

Cilantro can be harvested fully or partially, requiring very little maintenance like trimming.

If using a partial harvest, the **first harvest will take place at about 5 weeks after transplant** and the **second at about 8 weeks after transplant**. The second harvest will be lower than the first.
