Seedling treatment

Before planting seedlings of gerbera should be treated.

Plugs of gerbera seedlings are dipped into Mancozeb solution (1 g / L of water) for 5 minutes before planting.

Planting of seedlings

Gerbera plants should be planted with following spacing.

Row to row : 35cm

Plant to plant : 30cm

By maintaining such spacing six plants can be accommodated per square metre.

Thus, for planting in 1000 square metre of polyhouse, 6000 seedlings will be required.

Planting of seedlings...2

Planting should be done without disturbing the root-ball. Plug of Gerbera plant should be 30% above of soil and 70% below of the soil. While planting gerbera seedlings, the crown of plants should be 1-2 cm above soil-level.
