

MSA using EMBL-EBI Clustal omega

AIM of the experiment-

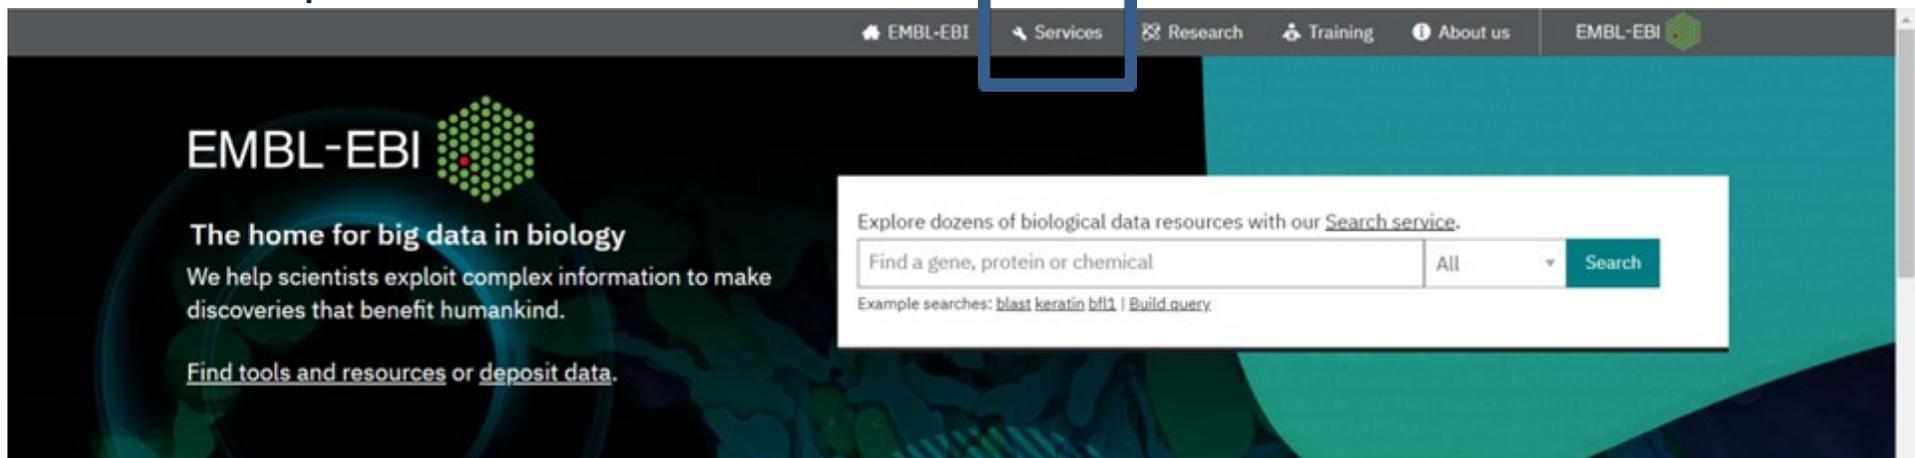

- To generate alignments between **three or more** sequences (multiple sequence alignment-MSA) by using clustal omega tool of EMBL-EBI.

Principle-

- The aim of EMBL's research is to achieve a fundamental understanding of biological processes. We need to study and understand biological phenomena and systems in their full complexity.
- EMBL has developed an integrative, interdisciplinary structure that is ideally suited to tackling this challenge.
- Clustal Omega is a multiple sequence alignment program for aligning **three or more** sequences together in a computationally efficient and accurate manner.
- It produces biologically meaningful multiple sequence alignments of divergent sequences.
- Evolutionary relationships can be seen via viewing Cladograms or Phylograms.

Procedure

- Google EMBL-EBI
- EMBL-EBI home page
- In the top task bar click on services

The screenshot shows the EMBL-EBI website home page. The top navigation bar includes links for EMBL-EBI, Services, Research, Training, and About us. A blue arrow points to the 'Services' link, which is highlighted with a blue box. Below the navigation bar, the main content area features the EMBL-EBI logo and the text 'The home for big data in biology'. A search bar is visible with the text 'Find a gene, protein or chemical' and a 'Search' button. Below the search bar, there are example searches: 'blast keratin bfl1 | Build query'.

EMBL-EBI response to COVID-19

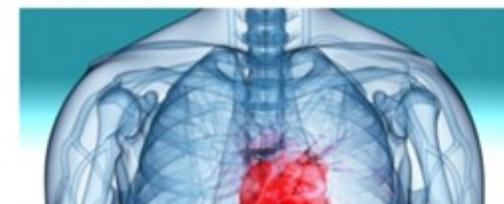

To help protect staff and visitors from the coronavirus outbreak, EMBL-EBI closed its premises on 18 March at 17:00. Our data resources and tools will continue to function as normal. [Read more >](#)

Featured topic

The featured topic banner displays the 'COVID-19 Data Portal' with a red coronavirus particle illustration. It includes a 'Watch later' button and a 'Share' button. A dark grey box at the bottom of the banner contains the text 'SARS-CoV-2'.

Tools > Multiple Sequence Alignment > Clustal Omega

Multiple Sequence Alignment

Clustal Omega is a new multiple sequence alignment program that uses seeded guide trees and HMM profile-profile techniques to generate alignments between **three or more** sequences. For the alignment of two sequences please instead use our [pairwise sequence alignment tools](#).

Important note: This tool can align up to 4000 sequences or a maximum file size of 4 MB.

STEP 1 - Enter your input sequences

A →

Enter or paste a set of

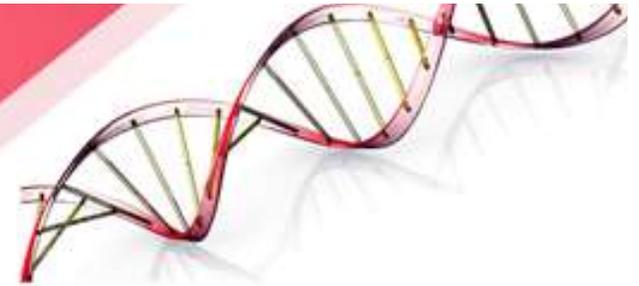

PROTEIN

D →

sequences in any supported format:

Or, upload a file: No file chosen

Use a [example sequence](#) | [Clear sequence](#) | [See more example inputs](#)

- A. Set the data base DNA, RNA, Protein according to your query sequence which you have.
- B. Put atleast 3 sequence for comparision, and at a time we can put multiple number of sequence for MSA.
- C. Here I have protein sequence of RUBISCO (ribulose-1,5-bisphosphate carboxylase/oxygenase) large subunit from 6 different phylum and sub-phylum of kingdome plante.
 1. *Chlamydomonas raudensis* (algae)
 2. *Riccia fluitans* (Bryophyta)
 3. *Lycopodium clavatum* (Pteridophyta)
 4. *Cycas szechuanensis* (Gymnosperm)
 5. *Oryza sativa Japonica* Group (Angiosperm-Monocot)
 6. *Arabidopsis thaliana* (Angiosperm-Dicot)
- D. Paste the sequences.
- E. Click on submit below.

Conclusion

- Multiple sequence alignment is a tool used to study closely related genes or proteins in order to find the evolutionary relationships between genes and to identify shared patterns among functionally or structurally related genes.
