

Floral Biology & seed development and morphology and Modes of propagation in vegetables

Dr. Praveen Kumar

Asst. Prof & Head

GPB, MSSSoA, CUTM

- **Vegetables** are parts of plants that are consumed by humans or other animals as food.

- **Include**

- **Flowers** - Cauliflower

- **Fruits** - Brinjal

- **Stems** - Celery

- **Leaves** - Lettuce

- **Roots** - Radish and

- **Seeds** - Corn

Floral Biology

Formation of seed

Seed morphology

seed includes :
Embryo,
Nutritive tissue
Seed coat

Development of Seed and Seedling

- **Modes of Propagation in vegetables:**

- (i) **Sexual** -

- Fusion of male and female gamete

- Seed – Tomato, Brinjal etc.

- (ii) **Asexual**

- Without fusion of male and female gamete

- Vegetative propagation

- **Vegetative propagation**

Tuber- potato

Rhizome – ginger, turmeric

Bulb – onion

Corm - arwi
